

Assignment no 9

Laravel Project Setup Guide

Step 1 — Open Command Prompt and Navigate to the Directory Launch the Command Prompt and change your working directory to the XAMPP htdocs folder located at C:\xampp\htdocs.

Step 2 — Create a New Laravel Project Run the following command to generate a new Laravel project named **manoj**:

```
laravel new manoj
```

Step 3 — Configure the Project Settings During the installation process, apply the following selections:

Prompt	Selection
Starter Kit	None
Testing Framework	0
AI-assisted Coding	No
Database	MySQL
Default Database Migration	Yes
Ignore Scripts	Yes

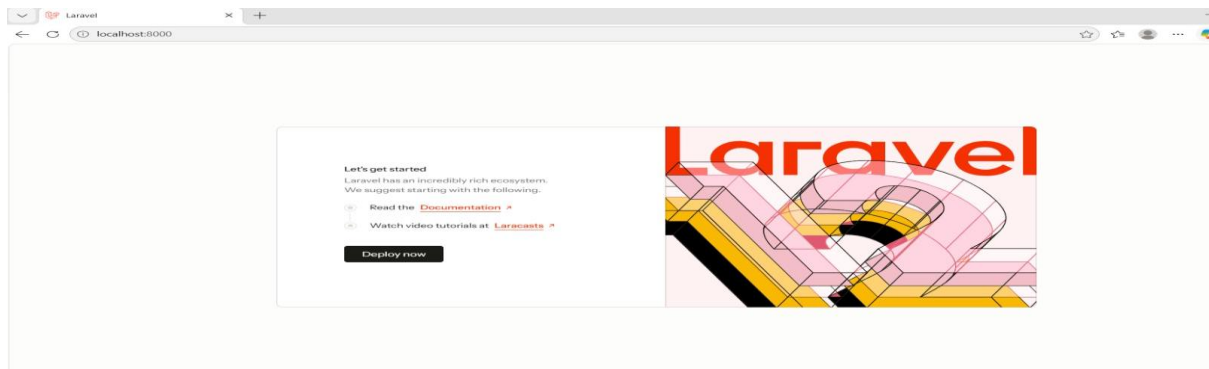

Step 4 — Launch the Development Server Once the project is ready, navigate into the project folder and start the server:

```
cd manoj
```

```
composer run dev
```

Step 5 — View in Browser Open your browser and visit the following URL to confirm the application is running:

<http://localhost:8000>

Creating a View and Defining a Route in Laravel

Step 1 — Create the View File Run the following command in your terminal to generate a new view file named **home**:

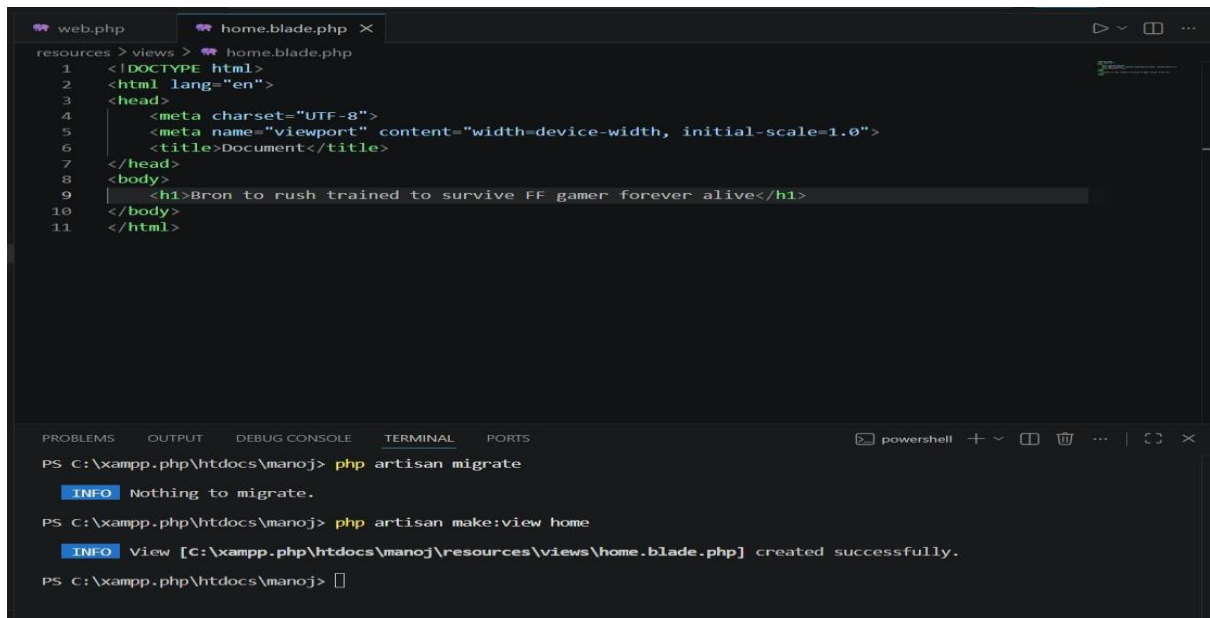

```
php artisan make:view home
```

Step 2 — Define the Route Open the web.php file and add a route for the home page so that Laravel can properly handle any incoming requests directed to that URL.

Step 3 — Edit the Blade Template Locate and open the home.blade.php file, then write the required HTML content inside it to structure and build your home page.

Step 4 — Save and Preview in Browser Once all changes have been saved, open your browser and visit the following URL to view your completed home page:

<http://localhost:8000/home>

The screenshot shows the VS Code editor with the `home.blade.php` file open. The file content is as follows:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>Bron to rush trained to survive FF gamer forever alive</h1>
10 </body>
11 </html>
```

Below the editor, the terminal window shows the following commands and output:

```
PS C:\xampp.php\htdocs\manoj> php artisan migrate
INFO Nothing to migrate.

PS C:\xampp.php\htdocs\manoj> php artisan make:view home
INFO View [C:\xampp.php\htdocs\manoj\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\manoj>
```

Creating a View and Defining a Route in Laravel

Step 1 — Create the View File Run the following command in your terminal to generate a new view file named **about**:

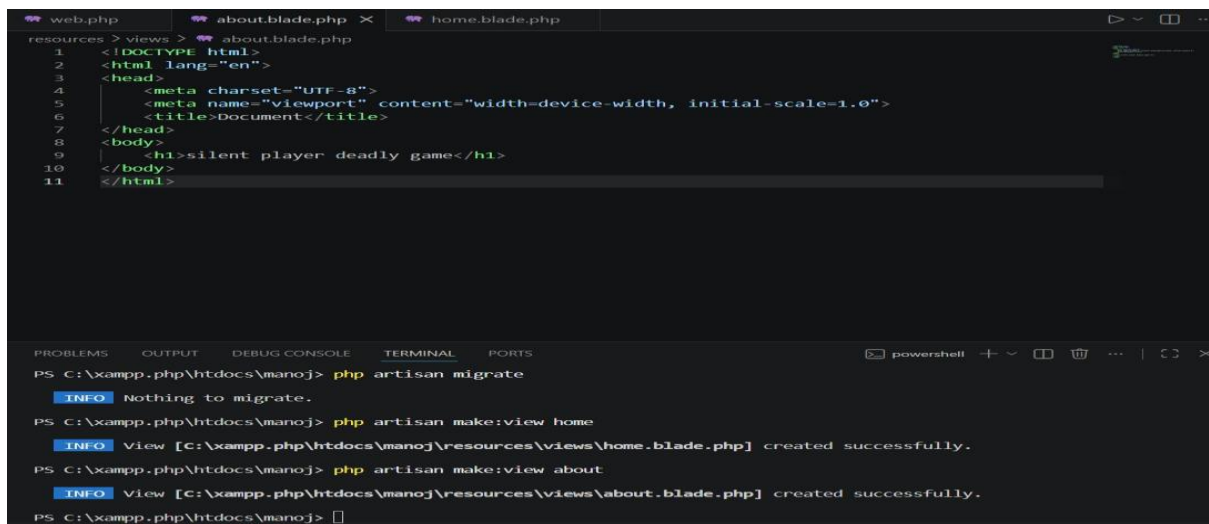

```
php artisan make:view about
```

Step 2 — Define the Route Open the web.php file and add a route for the home page so that Laravel can properly handle any incoming requests directed to that URL.

Step 3 — Edit the Blade Template Locate and open the about.blade.php file, then write the required HTML content inside it to structure and build your about page.

Step 4 — Save and Preview in Browser Once all changes have been saved, open your browser and visit the following URL to view your completed about page:

<http://localhost:8000/about>

The screenshot shows a code editor with three tabs: web.php, about.blade.php, and home.blade.php. The about.blade.php file is open, displaying the following HTML content:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4     <meta charset="UTF-8">
5     <meta name="viewport" content="width=device-width, initial-scale=1.0">
6     <title>Document</title>
7 </head>
8 <body>
9     <h1>silent player deadly game</h1>
10 </body>
11 </html>
```

Below the code editor is a terminal window showing the output of several commands:

```
PS C:\xampp.php\htdocs\manoj> php artisan migrate
INFO Nothing to migrate.

PS C:\xampp.php\htdocs\manoj> php artisan make:view home
INFO View [C:\xampp.php\htdocs\manoj\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\manoj> php artisan make:view about
INFO View [C:\xampp.php\htdocs\manoj\resources\views\about.blade.php] created successfully.

PS C:\xampp.php\htdocs\manoj>
```
